

Intermediate Pre-adipocytes: Enriched Pathways for Both Healthy and Obese

Pathway

positive regulation of protein localization to plasma membrane
endocytosis
cell surface receptor protein tyrosine phosphatase signaling pathway
regulation of cell shape
growth hormone receptor signaling pathway
cellular response to reactive oxygen species
cell adhesion
cell migration
negative regulation of anoikis
SMAD protein signal transduction
regulation of DNA-templated transcription
positive regulation of GTPase activity
protein autophosphorylation
cellular response to insulin stimulus
positive regulation of miRNA transcription
positive regulation of phosphatidylinositol 3-kinase/protein kinase B signal transduction
peptidyl-tyrosine phosphorylation
protein phosphorylation
positive regulation of cell migration
regulation of small GTPase mediated signal transduction
