

Mature adipocytes: top 20 enriched pathways for both healthy and obese

Pathway

positive regulation of chondrocyte differentiation
positive regulation of potassium ion transport
amyloid fibril formation
peptidyl–threonine phosphorylation
regulation of protein phosphorylation
positive regulation of cartilage development
protein–containing complex assembly
negative regulation of macrophage derived foam cell differentiation
synaptic membrane adhesion
positive regulation of vascular endothelial cell proliferation
bleb assembly
hippo signaling
axon guidance
positive regulation of calcium–mediated signaling
peroxisome organization
positive regulation of MAP kinase activity
positive regulation of lipid biosynthetic process
extracellular matrix organization
positive regulation of glycolytic process
platelet aggregation
