

negative regulation of sodium ion transmembrane transporter activity

positive regulation of phospholipase C activity

protein-containing complex localization positive regulation of chemokine (C-X-C motif) ligand 2 production

neuron remodeling

platelet-derived growth factor receptor signaling pathway response to progesterone

microtubule polymerization

NADH metabolic process

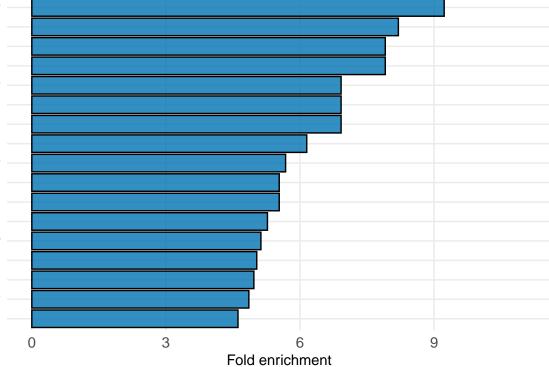

NADP metabolic process

amyloid-beta clearance by transcytosis establishment of endothelial barrier

branched-chain amino acid catabolic process

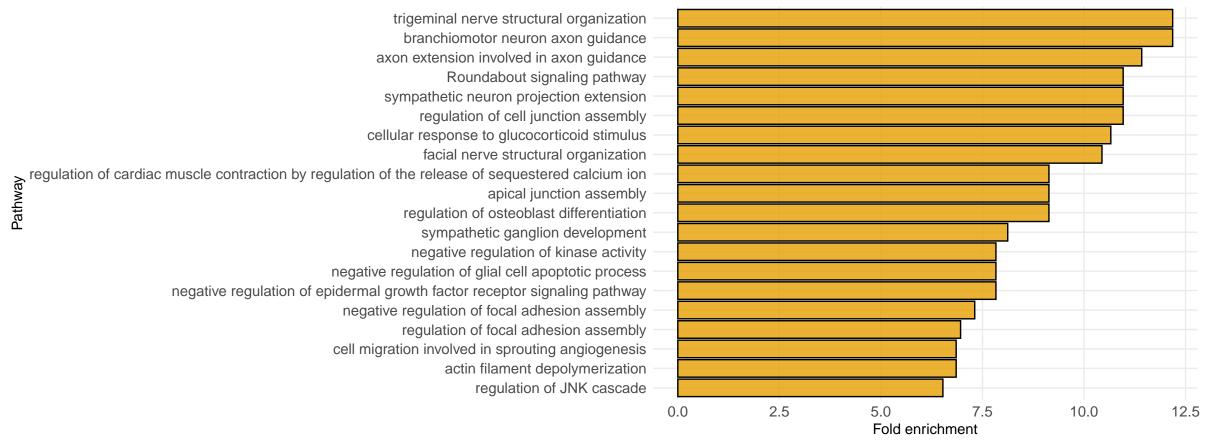

positive regulation of wound healing actin filament bundle assembly

embryonic digit morphogenesis

В

## Enriched pathways in obese sample only

## Enriched pathways in both healthy and obese samples
